
Partner Enrollment (PEN-1)

The index may enroll different partners over the course of the study if the relationship and the partner meet protocol eligibility criteria. The index may end the relationship with the primary partner, begin a relationship with a new primary partner, or re-establish a relationship with a previous primary partner. However, only one partner can be enrolled at any one time.

All partner enrollment forms must be completed each time a new partner enrolls in the study.

Item-specific Instructions:

- **Visit code:** The partner's visit code must match the visit code of the index's current visit.
- **Item 2:** Mark "N/A" if the index is not currently receiving study medications.
- **Item 4a:** For a partner previously enrolled in the study, record the last ID under which s/he was enrolled. Do not use this old ID on any current or future CRFs for this participant.
- **Item 6b:** Record the date of the last time ART medication was taken for prevention of peripartum transmission. When possible record the complete date (day, month, year) of the last dose of ART medication received. If the participant does not know the complete date, record the month and year.
- **Items 6a1–6a5:** Record the codes for all study medications in the participant's current regimen and the codes for any new study medications being dispensed for the first time at this visit. Refer to Atlas for current Medication Code List. *Note: During the study, this medication code list may be updated as new ARTs become available. Existing codes will not change, but new codes may be added. Please refer to the SSP appendices for medication code additions. If a drug used at your site is not listed, contact the SCHARP Project Manager for a new code.*
