Operational Retention defined in this report as: # Participants who completed the visit / # Participants expected for the visit + Participants who completed visit when not expected.

Visits are considered 'completed' based on submission of Follow-up Visit Summary CRFs.

Early, On Time, and Late visit completion is assessed relative to visit windows. Visit windows for follow-up visits missing the base visit is based on the target date of the missing base visit.

Visits are considered 'expected' when the visit window is closed on or before the report date, subject to the additional condition(s) below:

2 weeks postpartum visit is expected only if consent to provide breast milk was provided at screening.

Retention is shown by enrolling site. Inappropriately enrolled participants are not included in retention calculation.

Operational Retention defined in this report as: # Participants who completed the visit / # Participants expected for the visit + Participants who completed visit when not expected.

Visits are considered 'completed' based on submission of Date of Visit CRFs.

Early, On Time, and Late visit completion is assessed relative to visit windows. Visit windows for follow-up visits missing the base visit is based on the target date of the missing base visit.

Visits are considered 'expected' when the visit window is closed on or before the report date, subject to the additional condition(s) below:

2 weeks postpartum visit is expected only if consent to provide breast milk was provided at screening.

Retention is shown by enrolling site. Inappropriately enrolled participants are not included in retention calculation.

Operational Retention defined in this report as: # Participants who completed the visit / # Participants expected for the visit + Participants who completed visit when not expected.

Visits are considered 'completed' based on submission of Follow-up Visit Summary CRFs.

Early, On Time, and Late visit completion is assessed relative to visit windows. Visit windows for follow-up visits missing the base visit is based on the target date of the missing base visit.

Visits are considered 'expected' when the visit window is closed on or before the report date, subject to the additional condition(s) below:

2 weeks postpartum visit is expected only if consent to provide breast milk was provided at screening.

Retention is shown by enrolling site. Inappropriately enrolled participants are not included in retention calculation.

Total Completed On Time/Total Expected	100%	72.7%	81.8%	72.7%	88.9%

Operational Retention defined in this report as: # Participants who completed the visit / # Participants expected for the visit + Participants who completed visit when not expected.

Visits are considered 'completed' based on submission of Follow–up Visit Summary CRFs.

Early, On Time, and Late visit completion is assessed relative to visit windows. Visit windows for follow–up visits missing the base visit is based on the target date of the missing base visit.

Visits are considered 'expected' when the visit window is closed on or before the report date, subject to the additional condition(s) below:

2 weeks postpartum visit is expected only if consent to provide breast milk was provided at screening.

Retention is shown by enrolling site. Inappropriately enrolled participants are not included in retention calculation.
