<b>HIV Test Results (HTR-1)</b>	
<b>Purpose:</b>	This form documents confirmatory HIV test results and final HIV status during follow-up for female participants. This form is completed each time a female participant has a positive HIV EIA test result during study follow-up.
<b>General Information/Instructions:</b>	Record specimen test results on this form as they become available from the local lab. Fax this form to SCHARP DataFax once results for all required specimens are available and recorded and item 3 has been completed.
	<ul style="list-style-type: none"> <li>• <b>Visit Code:</b> The visit code recorded on this form should be the same visit code recorded on the Local Laboratory Results form documenting the Sample 1 positive HIV EIA test result.</li> <li>• <b>Specimen Collection Date:</b> Record the date the specimen was collected (not the date results were reported or recorded on the form). For Sample 1, the Specimen Collection Date should be the same date as the collection date of the HIV EIA positive specimen.</li> <li>• <b>Not done/Not collected:</b> Mark the "Not done/Not collected" box in the event that a specimen is collected, but a result is not available due to specimen loss or damage. Record the reason why the result is not available on the Comments lines at the bottom of the form.</li> </ul>
<b>Item-specific Instructions:</b>	
<b>Item 3:</b>	Once a participant's HIV status has been determined, record the final HIV status. If, per the appropriate algorithm, the final HIV status is not clear, mark the "other, specify" box and provide a reason(s) on the line provided.
<b>Comments:</b>	Document any problems or reasons why expected results are not available (for example, if the sample was lost or damaged), on the lines provided.
